

To whom it may concern,

My name is Jeff Bearden with CUDD Pressure Control located in Broussard Louisiana. I was introduced to the Fuel Ox Infinity Lube while working in PA early in 2010 performing PM and repairs on our oil and gas wells. No one is more skeptic than I so even though I was impressed with what I saw. I placed an order and moved forward with testing.

In my line of work, we have many moving parts on our high-pressure double pumper fluid pumps. I have tried every grease and oil known to the industry, but what I witnessed with this metal conditioner was nothing short of a paradigm shift in knowledge of lubrication. Our wears and greasing intervals were reduced so drastically that I've commissioned our main office to start full implementations throughout all applications of this PM program. It's been well over a year now since I started, and my only regret is to know the amount of savings we could have witnessed by only treating a few applications.

It's perfectly ok to be skeptic with all the hype on specialty lubricants, but never miss an opportunity to investigate options that may prove real savings. I highly advise Fuel Ox's ability for consulting on important information regarding all your lubrication needs. I will be in discussion with other oil well companies about Fuel Ox Infinity Lube product line.
